## Tissue or cells

- Isolate total RNA
- Treat with DNase I

- Poly A<sup>+</sup> RNAs anneal with Biotinylated Oligo(dT)

- Biotin binds to Streptavidin Magnetic Beads
- Wash away poly A<sup>-</sup> RNAs and other impurities

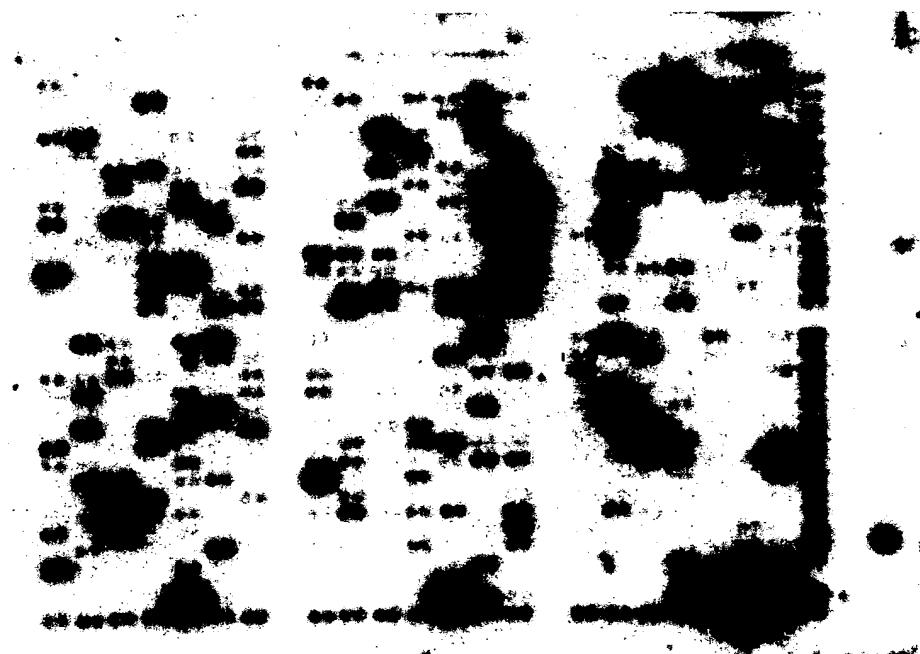

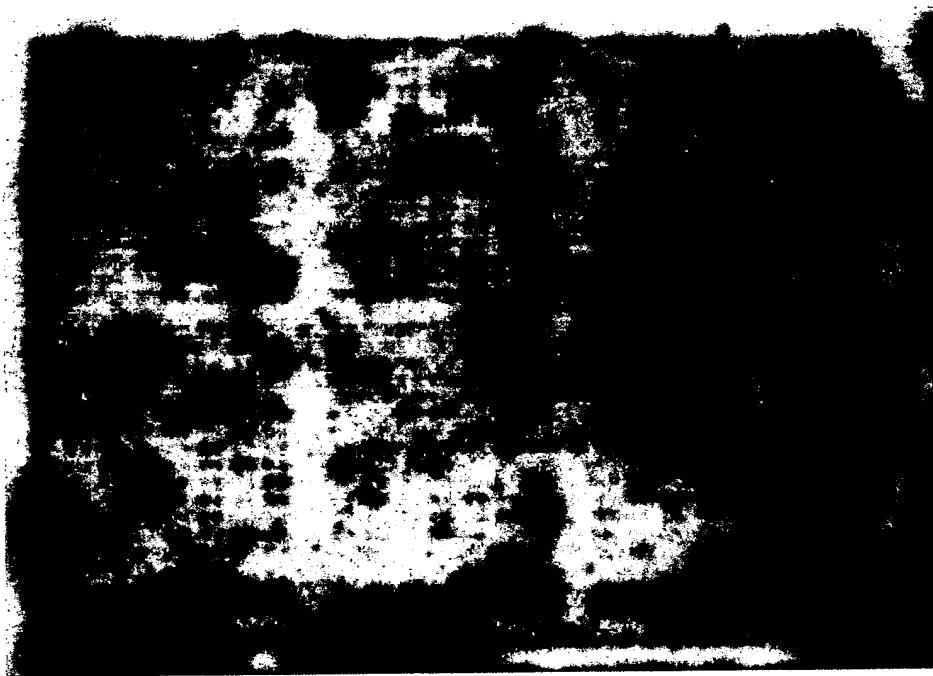

Add gene-specific  
primer mix &  
other reagents  
provided with  
your Atlas™ Array

- Atlas™ cDNA probe synthesis  
and labeling procedure

**Elute probe from beads, purify,  
and hybridize to Atlas™ Array**
